Dr. Amruta Pattnaik
Project Coordinator

Dr. Parthish Kumar Paul (Signature of External Examiner)
Project Coordinator

ABSTRACT

Chatbot provide a text-based User Interface, thus allowing the user to type command and receive text as well as text to speech response. Chatbots are usually a stateful service, remembering previous commands in order to provide functionality. When chatbot is integrated with web services it can be used by an even larger audience. The purpose of this project is to showcase the power of chatbots and how they can be an alternative to using an application or even a website. The chatbots should be easy to use, respond in a timely fashion and be all round user friendly. The bots should make the users interaction as easy and fast as possible to ensure that the users time is not wasted and that they get what they want without any difficulty or misunderstanding from the bot. The conversation should flow and always keep the user in control of the conversation. Users should come away from their experience with the chatbot and think that it was a fun, easy to use and straightforward interaction that would encourage them to comeback without any hesitation. . These chatbot can be used in small industries or business for automating customer care as user queries will be handled by chat bots thus reducing need of human effort, errors and expenditure.

ACKNOWLEDGEMENT

We express our deep gratitude to **Dr. Parthish Kumar Paul, Assistant Professor, Department of Electrical & Electronics Engineering** for his valuable guidance and suggestions throughout our project work.

We would like to extend our sincere thanks to **Mr. Ajit Kumar Sharma, Head of the Department, EEE** for his time-to-time suggestions to complete my project work. We are also thankful to **Prof. (Dr.) Sanjay Kumar, Director** for providing us the facilities to carry out our project work.

We are thankful to **Dr. Parthish Kumar Paul and Dr. Amruta Pattnaik, Project Coordinators** for their valuable guidance.

Shaleen Singh
